

AI log Sprint 1

Task 1: Overview of picture upload code using GridFS and multer

Purpose of AI Use: Brainstorming and coding

Chat Link: <https://share.gemini.google/gcDsTpPH1enp>

AI-Suggested Content: Generated different parts of the code including the HTML, front-end JS, back-end JS with Gridfs initialization and multer temp storage, and apis handling GET and POST using openUploadStream and openDownloadStream.

Validation: Compared with the documentation and tested its functionality manually.

Decision: Modified and partially accepted due to the need to adapt the code to the code in the repository.

Reflection: AI helped give an overall picture of how the code should look and its functionality.

Responsible Person: Emmanuelle Lin
