

Sprint 1 AI log

Task 1: Improving input validation and Verification

Purpose of AI use: Coding the scenarios in which the input rules can be violated and dealing with each one specifically and alerting the user to the exact problem.

AI-Suggested Content: the AI managed to access the files in the project and modify each one according to my specifications. It also provided a summary for which files it altered and what it did.

Validation: The code was tested and verified after the changes were made by running the program and testing every exception.

Decision: The AI output was accepted without modification.

Reflection: The AI managed to efficiently, accurately and methodically catch every exception and tackle each one accordingly.

Responsible Person: Bahaeddine Mahfoudh
