

Title: ** Sprint 1 AI Usage Log [Freddy Mvemba]

Team: [LABSJ3]

Course: SOEN 341 — Fall 2026

Project: CareerConnect

Sprint: 1 Entry 1 — Generate Initial User Stories

Task ID/Title: Task 1.1 — Initial User Story Generation

Purpose of AI Use: Requirements elicitation / brainstorming

Chat Link or Prompt/Response:

Prompt: "Generate 3 user stories for a job search and application tracking platform called CareerConnect, covering both job seekers and recruiters."

Response: * Attached in `Sprint1\_Appendix.pdf`, Appendix A.

AI-Suggested Content: AI returned three user stories covering: (1) account registration, (2) job search, and (3) application tracking, split across job seekers and recruiters.

Validation:

- Compared against the Sprint 1 project description (Pages 3–5 of the project doc).
- Confirmed both primary user types were covered.
- Reviewed during team meeting on [date].
- Cross-checked against the expanded 15-story list the team produced.

Decision: Modified — expanded from 3 to 15 stories after team brainstorming (see `Team\_Generated\_Stories.pdf`).

Reflection: The AI output was a useful starting skeleton but too generic and too short. It missed recruiter-side workflows (posting jobs, viewing applicants, updating statuses) and application tracking features. Team brainstorming was required to reach the required 10+ stories and to add original features.

Responsible Person: [Freddy Mvemba]

Entry 2 — Generate `style.css` for `index.html`

Task ID/Title: Task 1.2 — Landing Page Styling

Purpose of AI Use: Implementation / UI assistance

Chat Link or Prompt/Response:

Prompt: "give a simple style.css for index.html"

Response: Attached in `Sprint1\_Appendix.pdf`, Appendix B.

AI-Suggested Content: AI provided a basic CSS stylesheet with layout, typography, and button styling suitable for the landing page.

Validation:

- Applied to `index.html` and rendered locally in the browser.
- Peer-reviewed by [teammate name] on [date].
- Checked that all required elements (nav, hero, login/register buttons) displayed correctly.

Decision: Modified — adjusted color palette and spacing to match team design choices.

Reflection: AI was effective for boilerplate CSS and saved time. The generated styling was generic and needed manual tuning to match the CareerConnect visual identity, but it was a solid foundation.

Responsible Person: [Freddy Mvemba]

Entry 3 — Generate `style.css` for `register.html`

Task ID/Title: Task 1.3 — Registration Page Styling

Purpose of AI Use: ** Implementation / UI assistance

Chat Link or Prompt/Response:

Prompt: "give a simple style.css for register.html"

-**Response:** Attached in `Sprint1\_Appendix.pdf`, Appendix C.

AI-Suggested Content: AI returned a CSS file with form field styling, input validation colors, and a submit button layout.

Validation:

- Applied to `register.html`, tested in browser.
- Verified form fields, labels, and submit button rendered correctly.
- Peer-reviewed by [teammate name] on [date].

Decision: Accepted** with minor formatting cleanup.

Reflection: AI output was directly usable for a simple registration form. Useful for rapid prototyping; will still require refinement for responsive design in later sprints.
